

*How can daily living aids  
keep you **independent**  
for longer?*

# Independent Living Equipment in Derby

Medequip work with Derby City Council and NHS Derby City to provide the community equipment service in Derby.

As part of this service, Medequip aim to raise the awareness of how simple aids can make a big difference in enabling continued independent living at home. You can try out equipment in our showroom at our distribution centre.

## Customer Stories

Mary was feeling isolated and lonely in her supported living home as she found it difficult remembering telephone numbers. Since purchasing a picture pad phone she is able to phone family and friends whenever she wants. This has relieved stress and led to Mary being more independent.

John suffered from arthritis and had to wait for help to open jars and bottles. This led to him becoming depressed, frustrated and anxious. John purchased a multi-opener from Medequip and this meant that he could maintain his independence. This small purchase also prompted him to look at other aids which can help him and give John more confidence.

Lillie is 81 and lives at home alone. Lillie has recently asked her neighbours and family to help with cooking and daily chores as she has back problems preventing her from doing these things herself. Lillie has been falling asleep at her kitchen table as she was afraid that she would miss a visitor and as a result of this has been falling over causing damage and bruising to her body. Following the installation of her Lifemax doorbell Lillie now feels comfortable falling asleep in her riser recliner chair in her living room as she can now hear and see when visitors are at the door.
